

**Subject:** Request for data on infant mortality rates in Scotland between 1935 and 1970 at regional level for each year during the period.

**FOI reference:** 202000015658

**Date received:** 11/02/2020

**Date responded:** 27/02/2020

**Information requested:**

Data on infant mortality rates in Scotland between 1935 and 1970 at regional level for each year during the period.

**NRS Response:**

I enclose a copy of the of the information requested. Unfortunately we do not hold this data digitally before 1974 so we have copied the relevant pages from our annual review for the years stated. Due to the large number of tables enclosed, they have been combined over several files.

In some cases the tight spine of the book has made it difficult to read the numbers close to the spine so we have repeated these figures in red at the side of the page in case they are difficult to read.

The tables are broken down by region but over the period covered the regional geographies within Scotland may have changed so may not be consistent over time.
