

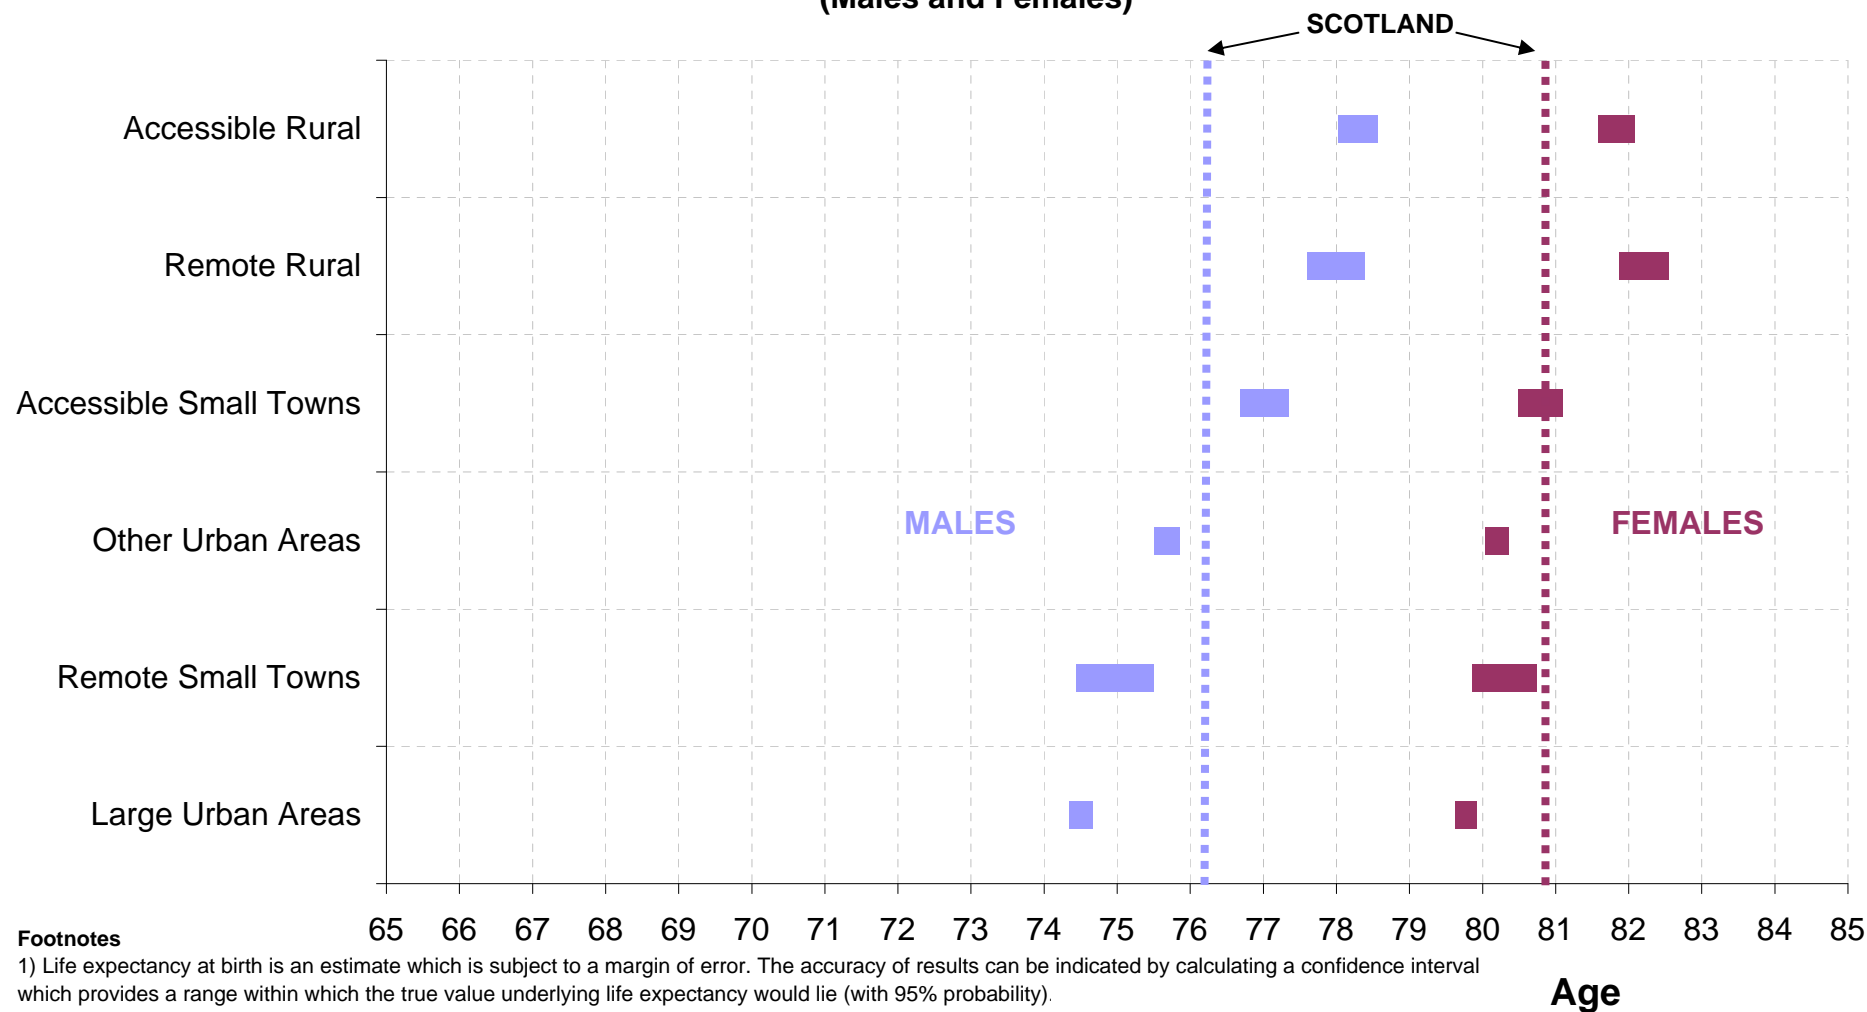

Figure 4.4: Life Expectancy at birth, 95% confidence intervals¹ for Urban / Rural² classification, 2008-2010 (Males and Females)

Footnotes

1) Life expectancy at birth is an estimate which is subject to a margin of error. The accuracy of results can be indicated by calculating a confidence interval which provides a range within which the true value underlying life expectancy would lie (with 95% probability).

2) Scottish Government's 6-fold Urban Rural Classification version 2009-2010. Refer to Appendix 2 for more details.

Please note the Scotland-level life expectancy estimate shown here is for use only as a comparator for the corresponding sub-Scotland-level figures. The definitive Scotland-level life expectancy estimate (based on interim life tables) is published on the Office for National Statistics website.
