2006	421	260	97	94	78	10	33	13	11	131
2007	455	289	114	109	79	4	47	11	11	157
2008	574	324	169	149	115	7	36	5	11	167
2009	545	322	173	154	116	9	32	2	6	165
2010	485	254	174	122	93	3	33	0	3	127
2011	584	206	275	185	123	8	36	8	24	129
2012	581	221	237	196	160	6	31	9	18	111
<b>annual averages:</b>										
2003-2007	377	229	90	128	103	12	38	13	11	129
2008-2012	554	265	206	161	121	7	34	5	12	140

**Footnotes**

1) More than one drug may be reported per death. These are mentions of each drug, and should not be added to give total deaths. Up to 2007, some pathologists reported only those drugs which they thought caused, or contributed to, the death. From 2008, they report separately:

(a) drugs which were implicated in, or which potentially contributed to the cause of death; and

(b) other drugs which were present but which were not considered to have had any direct contribution to the death.

The figures for 2008 onwards are on the first basis - i.e. basis (a) - which is now the standard basis for figures for individual drugs. The figures for 2008 have been revised from those published in Drug-related Deaths in Scotland in 2008<sup>1</sup>.

There may be other differences between years and/or areas in the way in which the information was produced - more information can be found in Section 2 of the commentary.

2) More information can be found in paragraph 3.3.1 of the commentary.
