Footnotes

1) This is the 2014-based principal population projection for Scotland, published on the NRS website.

2) The average household size is calculated by dividing the private household population (population minus people living in communal establishments) by the total number of households for each year. The private household population is available in Table D of the "Source Data Tables" published with the 2014-based household projections.

3) Average annual change is the result of dividing the absolute change (before rounding) by the number of years referred to.

Household figures are rounded to the nearest whole number.
