Footnotes

1) This is the 2014-based principal population projection, published on the National Records of Scotland (NRS) website.

2) The average household size is calculated by dividing the private household population by the total number of households for each year.

3) Average annual change is the result of dividing the absolute change (before rounding) by the number of years of the projection.

Household figures are rounded to the nearest whole number.

Footnote
 These figures are equal to the number of people in the age group projected to live in a 'one adult' household, divided by the projected population of that age and gender (including those living in communal establishments).

Footnote

1) The figure for 2014 is the same in all projections as they are all constrained to the household estimate for this year. Household figures are rounded to the nearest whole number.
