Footnotes

- 1) The figure for 2010 is the same in all projections as they are all constrained to the household estimate for this year.
- 2) This is the 2010-based principal population projection, published on the National Records of Scotland website.
- 3) The average household size is calculated by dividing the private household population by the total number of households for each year. Household figures are rounded to the nearest 10.
