

About this publication	Description
Publication title	Mid-2011 and Mid-2012 population estimates Scotland
Description	Population estimates by sex, age and administrative areas, Scotland, 2011 and 2012
Theme	Population and Migration
Topic	Population Estimates
Format	Excel workbooks, Adobe Acrobat Portable Document Format (PDF), Comma Separated Value (CSV) and HyperText Markup Language (HTML)
Data source(s)	<p>Births and deaths from the civil registration system.</p> <p>International migration from Long Term International Migration (LTIM) provided by Office for National Statistics (ONS). International Passenger Survey (IPS) data is allocated to Scotland using the Labour Force Survey (LFS) and also includes data on asylum seekers.</p> <p>Migration within the UK and distribution of international migrants within Scotland uses the National Health Service Central Register (NHSCR) and the Community Health Index (CHI).</p> <p>Armed forces from the 2011 Census data and our data collection of armed forces numbers in Scotland.</p> <p>Prisoner data is obtained from Scottish Government prison statistics.</p> <p>2011 Census day estimates obtained from National Records of Scotland (NRS) Census Division.</p> <p>Quality assurance uses electoral statistics, school census, dwelling counts and household size, national insurance number allocations to overseas nationals and the Pension Age Claimant database from Department for Work and Pensions (DWP).</p>
Date that data is acquired	<p>Ongoing through the year:-</p> <p>Census day figures June</p> <p>Armed Forces estimate June</p> <p>Births and deaths February</p> <p>The last of the migration data is finalised in June</p> <p>Prisoners estimate June</p>
Publication Release date	08 August 2013
Frequency	Annual
Timeframe of data and timeliness	The estimates refer to the population as at 30 June each year. The mid-year population estimates are usually published ten months after this date.
Continuity of data	<p>Scotland level mid-year estimates are available back to 1855. Council and NHS board area mid-year population estimates are available for the period from 1981 based on the council boundaries introduced in 1995.</p> <p>However, NHS board boundaries have changed during this time with the dissolution of Argyll & Clyde NHS board. The</p>

	<p>Argyll & Clyde council area was allocated to Highland NHS board and the rest of the former NHS board was used to create Greater Glasgow and Clyde NHS board by combining it with NHS Greater Glasgow.</p> <p>Other small changes to Council and NHS Board area boundaries have taken place over this time.</p>
Revisions statement	<p>A scheduled revision of the mid-year population estimates back to 2001 will take place in October/November 2013.</p> <p>Revisions and corrections to previously published statistics are dealt with in accordance with the Scottish Government Statistician Group corporate policy statement on revisions and corrections - a copy of which is available on the Scottish Government website.</p> <p>The mid-year estimates for mid-2003 to mid-2006 were revised in 2008 to take account of methodological improvements. Information available on the Mid-Year Population Estimates Revised 2003-2006 page of the NRS website.</p>
Concepts and definitions	<p>The notes and definitions for this publication can be found at the end of the Mid-2011 and Mid-2012 Population Estimates Scotland document on the NRS website.</p>
Relevance and key uses of the statistics	<p>These statistics are used for the allocation of government funds to Scotland, Council and NHS Board areas. They are used for a wide range of things. They are a main component of many other statistics such as population projections and are used as the denominator for per capita statistics. They are also used to measure progress towards the Scottish Government's Population Purpose Target and more information is available in the Scotland Performs section of their website.</p>
Accuracy	<p>Population estimates are based on the 2011 Census and updated annually by 'ageing on' the population and applying information on births, deaths and migration. Births and deaths are estimated using data from the civil registration system, which is considered to be virtually complete. Migration is more difficult to estimate because there is no comprehensive registration system in the UK. Migration is derived from the National Health Service Central Register (NHSCR) and Community Health Index (CHI) for migration within the UK, and from the International Passenger Survey (IPS) for international migration.</p> <p>The sample size for Scotland for the IPS is small, so estimates derived from this survey are subject to large sampling and non-sampling errors. National Records of Scotland (NRS) is conducting an on-going exercise to improve the quality of population estimates and also their key component migration. NRS contribute to the Office for National Statistics (ONS) Improving Migration and Population Statistics programme.</p>

Completeness:	The estimated population of an area includes all those usually resident there, whatever their nationality. Students are treated as being resident at their term-time address. Members of UK and non-UK armed forces stationed in Scotland are included; UK forces stationed outside Scotland are excluded. Short-term international migrants are excluded.
Comparability	The most recent population estimates for Scotland (mid-2011 and mid-2012) are comparable with population estimates from the rest of the UK and most countries around the world. Time-series comparisons are appropriate for estimates before mid-2002 and after mid-2010. Mid-2002 to mid-2010 estimates are to be rebased and are therefore not suitable for comparison.
Accessibility	It is the policy of the National Records of Scotland to make its website and products accessible according to published guidelines. More information is available in the Accessibility section of the NRS website.
Coherence and clarity	The statistics are provided in Excel, PDF and CSV format. They are designed to be consistent and incorporate comparable historical data where appropriate. The spreadsheets have been designed to make it easier to use the estimates in the way users want e.g. current year files as well as time-series files. The methodology is that used by many countries across the world with small changes to account for different data inputs.
Value type and unit of measure	Counts of males and females by single-year of age.
Official Statistics designation	National Statistics.
UK Statistics Authority Assessment	Assessed by UK Statistics Authority, report can be found within the UK Statistics Authority – Assessments section on the National Records of Scotland website. The UK Statistics Authority will hold another assessment in 2014.
