General Details

Dataset title: Estimated population resident in Scotland, by council area and country of birth, 2000 to 2015
Time period of dataset: 2000 to 2015
Geographic coverage: Scotland, council areas
Supplier: National Records of Scotland (NRS)
Department: Demographic Statistics, Population and Migration Statistics Branch

Methodology:

These country of birth estimates are published annually eight months after the reference period.

The data for this table is received from the Office for National Statistics (ONS).

The population estimates for country of birth are based on the Annual Population Survey (APS), which is the Labour Force Survey (LFS) plus various sample boosts which are included to enhance geographical coverage.

APS and LFS data were re-weighted in October 2014 and March 2015 respectively in line with the results of the 2011 Census. Population estimates by country of birth and nationality tables for the calendar years 2004 to 2013 were revised in light of the re-weighting exercise.

The LFS data used in the tables for 2003 and earlier years cover a period from March to February rather than January to December, and have not been subject to the reweighting applied to later years in light of the 2011 Census.

Confidence interval +/- is the upper(+) and lower(-) 95 per cent confidence limits. It is defined as 1.96 x standard error.

Standard error is an estimate of the margin of error associated with a sample survey.

Some estimates are suppressed as they are not considered reliable for practical purposes. In these instances, the confidence interval will be higher than the estimate.

It should be noted that the LFS:-

- * excludes students in halls who do not have a UK resident parent.

- * excludes people in most other types of communal establishments (for examples hotels, boarding houses, hostels, mobile home sites, etc).

- * is grossed to population estimates of those living in private households. An adjustment is made for those who live in some NHS accommodation and halls of residence whose parents live in the UK. For this reason the sum of the UK and non-UK country of birth estimates may not agree with the published population estimate.

The LFS weighting does not adjust for non-response bias by the country of birth variable.

For more information on how these estimates are produced go to the population by country of birth and nationality section within the estimates of special populations area of the National Records of Scotland website.
