

About this publication	Description
Publication title	Projected Population of Scotland (2012-based)
Description	Population projections for Scotland, by sex and single year of age.
Theme	Population and Migration
Topic	Projections
Format	Excel workbooks, CSV, HTML, and PDF files
Data source(s)	<p>Base year population data is taken from the latest mid-year population estimates.</p> <p>Past trends in fertility, mortality, life expectancy and migration are used for setting assumptions for the projections.</p> <p>The international migration assumption is based largely on International Passenger Survey data (IPS).</p> <p>The cross-border migration assumption is based on NHSCR data.</p>
Date that data is acquired	Ongoing.
Publication Release date	6 November 2013
Frequency	Biennial
Timeframe of data and timeliness	The most recent mid-year estimate is used as the base year for the projections. National projections for Scotland are published on the same day as the national population projections for the UK produced by the Office for National Statistics (ONS).
Continuity of data	Data is available on the National Records of Scotland (NRS) website going back to the 2001-based national population projections, and limited data is available for 1994-based projections. On the Government Actuary Department's website historic data back to the 1971-based Scotland population projections is available. Data from each set of projections is based on a different base population.
Revisions statement	<p>Projections are not subject to scheduled revision.</p> <p>Revisions and corrections to previously published statistics are dealt with in accordance with the Scottish Government Statistician Group corporate policy statement on revisions and corrections - a copy of which is available on the Scottish Government website.</p>
Concepts and definitions	Further information on NRS Projected Population of Scotland can be found within the Projected Population of Scotland (2012-based) publication the NRS website

Relevance and key uses of the statistics	The primary purpose of the projections is to provide an estimate of the future population of Scotland as a common framework for use in national planning in a number of different fields such as education and health. They also provide a basis for the sub-national population projections of Scotland.
Accuracy	The assumptions about future patterns in fertility, mortality and migration are based on analysis of past trends. The final decisions on assumptions take into account the views of a range of groups who are consulted including a UK expert advisory panel and key users in Scotland. There is limited accuracy of migration estimates as there is no comprehensive registration system in the UK.
Completeness	The published statistics are population projections at Scotland level, including components of change, and variant projections.
Comparability	Population projections of Scotland are comparable with national projections for other countries within the UK and Europe. Some comparisons are made within the publication with other UK and European countries.
Accessibility	It is the policy of the National Records of Scotland to make its website and products accessible according to published guidelines. More information is available in the Accessibility section of the NRS website.
Coherence and clarity	The statistics are provided in Excel, PDF and CSV formats. They are designed to be consistent, and incorporate comparable historical data where appropriate.
Value type and unit of measure	Counts of persons, males and females by single-year of age
Official Statistics designation	These statistics were assessed by the UK Statistics Authority and are designated as National Statistics subject to meeting the requirements set out in the assessment report.
UK Statistics Authority Assessment	Assessed by UK Statistics Authority, report can be found within the UK Statistics Authority – Assessments section on the National Records of Scotland website.
