

Table 2: Assumptions for the 2016-based principal and variant projections for Scotland

Variant	Long-term fertility (Total Fertility rate - TFR)	Life expectancy males (2041)	Life expectancy females (2041)	Net migration from the Rest of the UK (2041) (rounded to the nearest 100)	Net migration from overseas (2041) (rounded to the nearest 100)	Total Net migration (2041) (rounded to the nearest 100)
Principal projection	1.65	81.7	84.5	7,600	7,000	14,600
High population	1.75	82.9	85.6	8,300	15,500	23,800
High Migration	1.65	81.7	84.5	8,000	15,500	23,500
High Fertility	1.75	81.7	84.5	7,900	7,000	14,900
High Life expectancy	1.65	82.9	85.6	7,600	7,000	14,600
Low Life expectancy	1.65	79.8	82.8	7,500	7,000	14,500
Low Fertility	1.45	81.7	84.5	7,200	7,000	14,200
Low Migration	1.65	81.7	84.5	7,200	-1,500	5,700
Low population	1.45	79.8	82.8	6,800	-1,500	5,300
Natural change only	1.65	81.7	84.5	0	0	0
