TABLES

Demography

1	Age and sex Persons by age and sex, 2001 and 1991	23
2	Marital status Persons aged over 16 by marital status and sex, 2001 and 1991	24

Households and families

3	Household type Persons in households, and households by household type, 2001 and 1991	25
4	Family type Families by type of family and number of dependent children, 2001	26

Housing

5	Accommodation Households by accommodation type and Council area, 2001 and 1991	27
6	Tenure Households by tenure and Council area, 2001 and 1991	28

Cultural attributes

7	Ethnic group Persons by age and ethnic group, 2001 and 1991	29
8	Country of birth Persons by age and country of birth, 2001 and 1991	30
9	Religion Persons by current religion and religion of upbringing, 2001	31
10	Gaelic Persons aged 3 and over by ability in Gaelic and Council area, 2001 and 1991	32

Illness and health

11	Long-term illness and General health Persons by limiting long-term illness, general health and Council area, 2001 and 1991	33
12	General health Persons in households by tenure and general health, 2001	34

CONTENTS

TABLES (continued)

Economic activity

13	Sex Persons aged 16 to 74 by economic activity and sex, 2001 and 1991	35
14	Council area Persons aged 16 to 74 by economic activity and Council area, 2001 and 1991	36
15	Providing Care Persons by economic position and time spent providing care, 2001	37
16	National Statistics – Socio-economic Classification (NS-SeC) Persons aged 16 to 74 in employment by NS-SeC and sex, 2001 and 1991	38
17	Industry Persons aged 16 to 74 in employment by industry and sex, 2001 and 1991	39
18	Tenure by Economic Activity Persons aged 16 to 74 in households by tenure and economic activity, 2001	40
19	Ethnic group by Economic Activity Persons aged 16 to 74 by ethnic group and economic activity, 2001	41
20	Religion by Economic Activity Persons aged 16 to 74 by religion of upbringing and economic activity, 2001	42

Travel

21	Cars and vans Households by number of cars or vans and Council area, 2001 and 1991	43
22	Travel to work Persons aged 16 to 74 in employment who are not full-time students by means of travel to work and Council area, 2001 and 1991	44
23	Travel to study Persons travelling to place of study by means of transport and Council area, 2001	45

Educational Qualifications

24	Highest level obtained Persons aged 16 to 74 by highest level of qualification and Council area, 2001 and 1991	46

INTRODUCTION

This report is one of five printed reports presenting the main results from the 2001 Census in Scotland. The report provides summary statistics for the majority of census questions and topics taking where appropriate comparable statistics from the previous Census in 1991. It is published under the authority of, and to meet the requirements of, Section 4(1) of the Census Act 1920.

2001 Census Reports

There are five printed reports presenting the main results of Scotland's Census 2001.

Scotland's Census 2001 - 2001 Population Report (GROS 2002, ISBN 1-874451-66-4).

This report gives population by age and sex for Council areas.

The Registrar General's 2001 Census Report to the Scottish Parliament
(GROS 2003, ISBN 1-874451-70-2).

This is a summary report introducing the Census results – mainly at Scotland level. It also contains some brief commentary on the findings.

Key Statistics for Council areas and Health Board areas, Scotland
(GROS 2003, ISBN 1-874451-67-2).

This report provides summary statistics covering the majority of Census topics for Council and Health Board areas.

Key Statistics for Settlements and Localities, Scotland (GROS 2003, ISBN 1-874451-68-0).

This report provides summary statistics covering the majority of Census topics for Settlements and Localities.

Scotland's Census 2001 - Reference Volume (GROS 2003, ISBN 1-874451-69-9).

This report contains, for Scotland level only, the detailed statistical tables produced for the Census. It is useful as a guide to the many tables that are only available electronically. Comparable tables are available electronically for Council areas, Health Board areas, and a range of other areas.

Information in this report

This report, ***The Registrar General's 2001 Census Report to the Scottish Parliament***, is intended as a brief introduction to the wealth of statistics that are produced in a variety of formats and delivered in a variety of media for a variety of geographical areas. The report has also been made available on the GROS website at www.gro-scotland.gov.uk.

This report contains 24 tables, each giving information for Scotland. Some tables provide statistics for the 32 Council areas in Scotland. Table titles are listed on the contents page.

The results in this report are a combination of counts and (displayed in italics in the tables) percentages.

The tables in this report form only a small subset of the results to be made available from the 2001 Census. Information on further results and the different methods of accessing the results are provided in the **Further Information** section on page 3. More detailed information on the terms used in tables; comparability with 1991; the Census questions; and response and imputation rates is available as part of the *Supporting Information for the Census Results*. This can be found in the electronic document '*Scotland's Census - A guide to the results and how to obtain them*' on the Census pages of the GROS website (www.gro-scotland.gov.uk) or by contacting GROS Customer Services.

Comparisons with the 1991 Census

The 2001 Census results have been adjusted to take account of estimated undercoverage in the Census based on the One Number Census methodology, which used the results of the Census Coverage Survey (see page 7 for more detail on the **One Number Census**). Figures re-aggregated from the 1991 Census were not similarly adjusted for under-enumeration. However the bias in the 1991 figures caused by unadjusted underenumeration should not materially affect the percentage distributions presented in this report.

FURTHER INFORMATION

More detailed statistics covering the full range of topics from the 2001 Census in Scotland for a variety of geographical areas will be available by March 2003. Descriptions of the products and how they will be delivered are available in the Supporting Information section of the electronic document '*Scotland's Census – A guide to the results and how to obtain them*', which is available on the Census pages of the GROS website (www.gro-scotland.gov.uk).

SCROL (Scotland's Census Results On Line)

SCROL, accessible at www.scrol.gov.uk, from March 2003 will progressively provide free on line access to all of the detailed results from the 2001 Census in Scotland.

In addition to the website, a series of CD-ROMs has also been developed. These provide access to a wider range of data than the SCROL website, along with more functionality for analysing the results.

Contacts

Further information about the Census products, or assistance in finding the appropriate data or requests for additional data not part of the Census products can be obtained from GROS Customer Services.

2001 CENSUS BACKGROUND

Consultation

Potential users of the results from 2001 Census have been consulted since 1996, when plans for the first tests of procedures and questions were being planned. A White Paper *'The 2001 Census of Population'* published in March 1999 set out the (pre-devolution) UK government's plans for the 2001 Census. Further major consultations involving Roadshows and consultation papers took place in spring 1999 and autumn 2001 to identify user needs and to assist the design of the results to be produced from the collected data.

Legislation

The 1920 Census Act allows for the carrying out of a Census no sooner than five years after the previous Census. However, various other legislative requirements need to be fulfilled before a Census can be held. In the period up to publication of the White Paper, the Census Offices and users had been refining both the business cases for each Census topic and the wording of the question (or questions) to be asked in order to obtain the required information. Prior to every Census, a Census Order is required. This states the date of the Census, the people who are required to complete the form, those who are to be included on the form and the topics on which questions will be asked. The operational aspects of the Census also require legislative approval. This information is set out in Census Regulations, which contain details of how the Census is to be conducted. The Regulations include a copy of the Census form. The decision to include a question on religion in the 2001 Census, resulted in additional legislation, with the 1920 Census Act, Census Order 2000 and Census Regulations 2000 all requiring amendment to make provision for religion information to be asked.

Fieldwork

The Census was designed to collect information on the resident population on Census Day – 29 April 2001. Ahead of this day, enumerators delivered Census forms to every identified household space and communal establishment. Residents were asked to complete the forms with the information as correct on Census Day, and to return the completed forms by post. If a completed form was not received back, an enumerator visited the address in order to collect the form by hand or to issue a reminder to post back. Special arrangements were made to enumerate the Armed Forces and people sleeping rough. The overall response rate (that is, the proportion of people included on a returned Census form) is estimated as 96 per cent.

The Census was followed by the Census Coverage Survey (CCS), which took place between 24 May and 18 June 2001. This was an interview survey of some 36,000 households and 92 communal

establishments in Scotland. Comparison of the results of the CCS with the Census was used to adjust the Census counts for under-enumeration (see the **One Number Census** paragraphs). The CCS achieved a household response rate (the proportion of identified households, which were successfully interviewed) of 95 per cent.

Census content

The results are based on the information collected from the Census forms. Copies of the Census forms used are contained in the *2001 Census Definitions Volume* or available on the Census pages of the GROS website (www.gro-scotland.gov.uk). All questions included in the 1991 Census were included in the 2001 Census with the exception of questions relating to usual address and whereabouts on Census night (see **Populations covered in this report** in the **Definitions** section on page 10). However, the answer categories in some questions, such as ethnic group were updated. There were also new questions on general health, the provision of unpaid care, time since last paid employment, the size of work force at place of work, supervision of employees and two voluntary questions on religion.

The Census questions asked of all people covered:

- sex, age (date of birth) and marital status
- relationship to others in the household (where applicable)
- whether schoolchild/student
- whether term-time address
- country of birth
- ethnic group
- religion - current and upbringing
- health
- limiting long-term illness
- provision of unpaid care
- address one year ago
- address of place of work or study
- means of travel to work or study
- knowledge of Gaelic

whilst questions for those aged 16 to 74 covered:

- qualifications
- economic activity and employment status
- number of employees at place of work
- year since last employed
- occupation and industry of employment
- hours worked

in addition, the person filling in the form in each household was asked about:

- type of accommodation and whether self-contained
- number of rooms
- availability of bath/shower and toilet
- lowest floor level
- presence of central heating
- availability of cars or vans
- tenure
- landlord
- whether or not accommodation was rented as furnished

Processing

Returned forms were fed through scanning machinery, which captured all the ticked responses, and stored most written answers in digital form. The latter were coded into categories either by automatic systems, which recognise terms given in response to questions, or by manual coding. This data was then edited to ensure that the data was consistent, and was followed by an imputation process to supply responses for questions, which had not been completed on the original form.

One Number Census

Following the 1991 Census, it was acknowledged that the Census suffered from a degree of undercount, the extent and nature of which was not identified by the 1991 Census Validation Survey. As a result the detailed 1991 Census tables were not consistent with the final estimate of 1991 Census Day population.

To avoid a similar situation following the 2001 Census, the Census Coverage Survey (CCS) and the One Number Census (ONC) projects were initiated.

The 2001 CCS was an intensive enumeration of a representative sample of postcodes in Scotland and was designed to be independent of the Census and provide the ONC Project with the required data to estimate underenumeration. The ONC Project derives its name from the intention to eliminate different population counts so that all Census outputs add to one number – the national population estimate that has been adjusted for undercounting. The ONC Project ensured that the most appropriate estimation procedures were used to calculate the final Census data.

More detail on the conduct of the One Number Census is available on the Census pages of the GROS website (www.gro-scotland.gov.uk).

Comparability with the 1991 Census

Given the approach taken to estimating underenumeration in the 2001 Census, a comparison of percentage distributions will give a more useful comparison than a comparison of counts. It is comparisons of percentage distributions that are contained in this report.

A comparison of the coverage achieved in the 1991 and 2001 Censuses is presented in the table below.

Comparison of Census coverage in the 1991 and 2001 Censuses	<i>percentage</i>	
	1991	2001
Enumerated in the Census	96.9	96.1
People identified as missing and included in Census results	1.2	3.9
Census coverage of the population	98.1	100
Missing but not included in Census results	1.9	0
Total	100	100

The level of actual census enumeration was similar in 1991 and 2001, 96.9 per cent compared with 96.1 per cent, respectively. But, as the table shows, the 2001 Census results cover the whole population compared with 98.1 per cent coverage in the 1991 Census. The difference in coverage lies in the approach to estimating under-enumeration in the two Censuses.

In 1991, the Census method allowed enumerators to identify many occupied households where the people within them had not returned a form and include an allowance for them in the Census tables. This gave an overall coverage of 98.1 per cent. The method did not enable enumerators to identify people missed from households where a form was returned, nor to make an allowance for any occupied households that they failed to locate. Using data from administrative sources and the 1991 Census Validation Survey it was estimated that these people accounted for about 1.9 per cent of the population. These were not added to the Census tables.

In the 2001 Census, the One Number Census methodology allowed for both types of missing people to be adjusted for in the Census tables.

Quality of the Results

The use of the One Number Census methodology means that the results of the 2001 Census cover the entire population of Scotland, and are believed to be the most reliable results obtained by any Census in Scotland. However, there are a number of sources of potential error in the results. These include

- Incorrect or incomplete information provided on the forms.
- Sampling error related to estimates derived through the One Number Census process.
- Unidentified dependencies between the Census and the Census Coverage Survey.
- Errors introduced during processing and imputation.

Some elements of incorrect information will have been corrected during the edit process (see **Processing** above). Other biases will have been corrected by the One Number Census process. Following this, the results have undergone an extensive quality assurance process, including checks against aggregated administrative information on particular groups such as students and the Armed Forces. Elements of dependency between the Census and Census Coverage Survey have been identified and corrected for, by cross-checking with alternative data sources.

Since the adjustments for under-enumeration through the One Number Census methodology are estimates based on a sample survey, sampling errors can be used as a guide in assessing the accuracy of the adjustments. The sampling error can be used to construct a 95 per cent confidence interval - that is a range in which we can be 95 per cent confident that the true value lies. For the population of Scotland, this confidence interval is ± 0.3 per cent of the estimated population.

Confidentiality

The Registrar General has a legal obligation not to reveal information collected in confidence in the Census about individual people and households. Protecting the Census data is of key importance and steps have been taken to safeguard confidentiality and protect against disclosure of personal information provided on the Census form. Further information is given in *'Scotland's Census – A guide to the results and how to obtain them'*, which is available on the Census pages of the GROS website (www.gros-scotland.gov.uk) or by contacting GROS Customer Services.

DEFINITIONS

Populations covered in this report

Each table in this report relates to one or more populations, where population is used in the statistical sense of an item being counted. Many tables relate to the population 'All people', but other tables relate to subsets of 'All people', such as 'People in employment aged 16 to 74', or to distinct populations such as 'All households'.

People

In the 2001 Census information was collected only on usual residents (this contrasts to the 1991 Census which collected information on both usual residents and visitors on Census night). A usual resident at an address is generally defined as someone who spends most of their time residing at that address. It includes:

- People who usually live at the address but are temporarily away from home (on holiday, visiting friends or relatives or temporarily in a hospital or similar establishment) on Census Day.
- A spouse or partner who works away from home for part of the time, or is a member of the Armed Forces.
- Students at their term-time address.
- A baby born before 30th April 2001 even if he or she is still in hospital.
- People present on Census Day, even if temporarily, who have no other usual address.

However, it does not include:

- Anyone present on Census Day who has another usual address.
- Anyone who has been living, or will live, in a special establishment such as a residential home, nursing home or hospital for six months or more.

Households

A household comprises one person living alone, or a group of people (not necessarily related) living at the same address with common housekeeping - that is, sharing either a living room or sitting room or at least one meal a day.

More information on the definition of table populations can be found in the *2001 Census Definitions Volume* due to be published by the Office for National Statistics in March 2003 or from the Census Supporting Information which can be accessed via the electronic document '*Scotland's Census - A Guide to the results and how to obtain them*' on the Census pages of the GROS website (www.gro-scotland.gov.uk) or by contacting GROS Customer Services.

COMMENTARY

Demography

Age and sex (Table 1)

An ageing population

Of the 5,062,011 residents in Scotland on Census Day (29 April 2001), some 36 per cent were aged under 30. The corresponding figure from the previous Census in 1991 was 41 per cent. Conversely, the older age groups all increased as a proportion of the whole population (with the exception of the small 60-64 age group, who comprised 5 per cent of the population in both Censuses).

Males accounted for 48 per cent of the population in 2001. This proportion varied from 51 per cent of the 0 to 15 age group to 40 per cent of those aged 65 and over. More information about the basic demographic composition of the population of Scotland on both Census Day and at mid-year (30 June 2001) was given in *Scotland's Census 2001 - 2001 Population Report*, (GROS, ISBN 1-874451-66-4, £5). This included a breakdown by Council area. Figures for each Scottish Parliamentary Constituency are given in the **Appendix** to this report.

Marital status (Table 2)

Fewer married people

People who were recorded, as single (i.e. had never married) in the 2001 Census represented 31 per cent of the total population. This was an increase from 1991 when the corresponding figure was 27 per cent. Divorcees were another group to increase in relative terms (from 5 per cent in 1991 to 7 per cent). There were falls in the proportions of people who were widowed (from 10 per cent to 9 per cent) and married, including re-married and separated, (from 58 per cent to 54 per cent).

Males were more likely than females to be single or married, while females were more likely to be divorced or widowed.

Households and families

Household type (Table 3)

Households are getting smaller

There were 2,192,246 households in the 2001 Census containing 4,976,005 residents – an average household size of 2.27. The corresponding figure from 1991 was 2.44. The decrease in average household size is reflected in the changes in the proportion of types of household.

There were decreases in the proportions of persons living in household types Large family (from 18 per cent in 1991 to 15 per cent in 2001), Large adult (19 per cent to 17 per cent) and Small family (from 22 per cent to 21 per cent). Conversely, there were increases in the proportions of persons – and households - in types Single adult (persons increased from 5 per cent to 8 per cent), Single parent (from 5 per cent to 6 per cent) and Small adult (from 14 per cent to 15 per cent). There were also increases in the proportion of persons in Single pensioner households (from 6 per cent to 7 per cent). The proportion

of households in this category did not show an increase because the total number of households increased relatively more than the total number of residents.

The proportion of households with children (Single parent, Large family and Small family) decreased from 28 per cent in 1991 to 26 per cent in 2001.

Family type (Table 4)

Less than half of families headed by a married couple

The number of families in households identified in the 2001 Census was 2,352,535. The average size of family was 2.12 persons. The corresponding figure from 1991 was 2.26.

Married couple families represented 42.5 per cent of all families. This contrasted with 1991 when over half of all families were married couples. Each category of married couple family (classified by number of dependent children) fell broadly in proportion with the general fall – with couples with no dependent children in the household remaining the most common, followed by couples with 2 dependent children. Cohabiting couple families doubled in relative terms from 1991 (3.5 per cent) to 2001 (6.9 per cent). The proportions in each category based on number of dependent children increased with the general increase, with couples with no dependent children in the household the most common and, unlike married couples, couples with one dependent child next most common.

The proportion of families headed by a lone father (1.4 per cent in 2001) was slightly down from 1991, but of these the proportion with dependent children rose. The proportion of lone mother families rose overall (from 8.8 per cent to 9.6 per cent), with increases in the proportion of those with dependent children more than compensating for the decrease in the proportion with no dependent children.

Taking all these families together, it can be seen that dependent children were more likely to be in lone parent or cohabiting couple families in 2001 than in 1991.

Housing

Accommodation type (Table 5)

Houses and bungalows more prevalent

In almost two-thirds (64 per cent) of cases in 2001, a household occupied a whole house or bungalow. Council areas with particularly high proportions of such households were Aberdeenshire (87 per cent), Eilean Siar (93 per cent), Highland (87 per cent), Orkney Islands (92 per cent) and Shetland Islands (90 per cent). High proportions of households in flats were found in Aberdeen City (50 per cent), Dundee City (52 per cent), the City of Edinburgh (59 per cent) and Glasgow City (70 per cent).

The proportion of households occupying whole houses or bungalows increased from 61 per cent in 1991 to 64 per cent in 2001. Increases were particularly noticeable in West Dunbartonshire (up 7 percentage points), Renfrewshire, Glasgow City, Inverclyde, Dundee City (all 6 points higher), and North Lanarkshire (5 points higher).

Tenure (Table 6)

Large increase in owner occupation

The proportion of households owning their accommodation rose from 52 to 63 per cent between 1991 and 2001. There was also an increase in the proportion renting from the private sector (7 per cent to 10 per cent) and a corresponding decrease in the proportion in the social rented sector (i.e. renting from the Council, Scottish Homes, a housing association, housing co-operative, charitable trust or non-profit housing company). The increase in home ownership was fairly general across all Council areas although the proportions varied considerably from over 80 per cent in East Dunbartonshire and East Renfrewshire to below 50 per cent in Glasgow City.

The Council areas with the highest proportion in the social rented sector were Glasgow City and North Lanarkshire with over 35 per cent. The areas with the largest proportions of households in the private rented sector were fairly diverse with Dumfries & Galloway, Dundee City, the City of Edinburgh, Moray, Perth & Kinross and Scottish Borders all having 15 per cent in this category.

Cultural attributes

Ethnic group (Table 7)

More non-Whites than in 1991

Some 2 per cent of the population of Scotland in 2001 were from a minority (non-White) ethnic group, compared with 1.3 per cent in 1991. After the White ethnic group, the largest numbers of people were in the Pakistani, Chinese, and Indian ethnic groups. The table below shows the detailed changes between 1991 and 2001 for broadly comparable groupings of the different classifications used in either Census.

	2001	1991
All persons (100 per cent)	100.00	100.00
White	97.99	98.75
Indian	0.30	0.20
Pakistani	0.63	0.42
Bangladeshi	0.04	0.02
Other South Asian	0.12	0.09
Chinese	0.32	0.21
Caribbean	0.04	0.02
African	0.10	0.06
Black Scottish or Other Black	0.02	0.05
Other	0.44	0.18

The proportion of the population in each of the non-White groups increased, apart from in Black Scottish or Other Black, where the inclusion of a tick box for Mixed background on the 2001 Census form may have affected response.

The fall in the proportion of the White population was particularly marked in the younger age groups (for example the percentage of 16 to 29 year olds who were White fell from 98.4 to 96.8 per cent). The rise in the proportion of 0-15 year olds was particularly marked in the ‘Other’ group.

Country of birth (Table 8)

More English-born in Scotland

Roughly an eighth of the population of Scotland in 2001 (12.9 per cent) were born elsewhere, an increase from 10.9 per cent in 1991. By far the largest proportion of those born outwith Scotland were born in England.

As might be expected, the proportion of people born in Scotland was highest in the youngest age group. Among other age groups, the proportion born in Scotland was highest in the older population. The proportions of people born in Scotland in the age groups from 16 to 59 were relatively low. This reflects the numbers of people born in Northern Ireland and Other European Union countries in the 16 to 29 age group, and people born Elsewhere both in this age group and in the 30 to 44 age group.

Religion (Table 9)

Census data on religion for the first time

The 2001 Census contained for the first time two questions on religion relating to religion of upbringing and current religion. For religion of upbringing, by far the largest category was the Church of Scotland (47.3 per cent) followed by None (17.5 per cent) and Roman Catholic (17.0 per cent) – see table below. The largest of the non-Christian groups was the Muslim group with 0.8 per cent.

	% of all persons in each category: religion of upbringing	% of all persons in each category: current religion	% of those with religion of upbringing whose current religion same	% of those with current religion whose religion of upbringing same
All persons	100.0	100.0	81.2	81.2
None	17.5	27.5	91.7	58.4
Church of Scotland	47.3	42.4	82.3	91.7
Roman Catholic	17.0	15.9	86.4	92.4
Other Christian	8.4	6.8	62.6	77.1
Buddhist	0.1	0.1	66.9	46.1
Hindu	0.1	0.1	88.4	94.1
Jewish	0.1	0.1	76.0	87.8
Muslim	0.8	0.8	95.6	95.0
Sikh	0.1	0.1	87.2	90.6
Another Religion	0.2	0.5	63.1	19.8
Not Answered	8.4	5.5	59.6	90.6

A similar pattern is revealed for current religion, although the proportions of people adhering to the Church of Scotland (42.4 per cent) and Roman Catholic (15.9 per cent) were less than the equivalent proportions for religion of upbringing. The proportion of people recording None as their current religion at 27.5 per cent was greater than the corresponding proportion for religion of upbringing.

The above table also shows that the groups with the highest proportion of those brought up in the religion who are current adherents were Muslim (96 per cent), and, disregarding the None group, Hindu (88 per cent), Sikh (87 per cent) and Roman Catholic (86 per cent). The groups with the lowest proportion of

current adherents who were brought up in the same religion, again disregarding None, were Another religion (20 per cent), Buddhist (46 per cent) and Other Christian (77 per cent).

Gaelic (Table 10)

Fewer Gaelic speakers

The number of persons aged 3 or over who spoke Gaelic in 2001 was 58,652, compared with 65,978 in 1991, a fall of 11 per cent. The corresponding figures for those who could speak, read or write were 65,674 in 2001 and 69,510 in 1991, a fall of 6 per cent. The number who could speak, read, write or understand Gaelic in 2001 was 92,396.

For Scotland as a whole the proportion of persons aged 3 or over speaking Gaelic was 1.2 per cent (a fall from 1.4 per cent in 1991). The Council areas with the highest proportions speaking Gaelic were Eilean Siar (61.1 per cent), Highland (6.3 per cent) and Argyll & Bute (4.7 per cent).

Illness and health

Long-term illness (Table 11)

Large increase in recorded long-term illness

20 per cent of the population indicated that they had a long-term illness, health problem or disability that limited their daily activities or the work they could do in 2001. This was an increase over 1991 when 14 per cent reported such an illness. The proportion varied among Council areas with Glasgow City (26 per cent in 2001) and North Lanarkshire (23 per cent) highest, and Aberdeenshire (15 per cent), East Renfrewshire (16 per cent) and Shetland Islands (16 per cent) lowest. Allowing for the general increase in reporting such illness across Scotland from 1991 to 2001, the distribution among Council areas changed relatively little.

General health (Tables 11 and 12)

More poor health in social rented and rent free sectors

A new question in the 2001 Census asked about each person's general health over the twelve months before the Census. Around two-thirds reported that their health had been 'good', just over a fifth said it had been 'fairly good' with a tenth in the remaining category 'not good'.

As might be expected there was a strong relationship between the responses to the question on health and that on long-term illness. Only 15 per cent of those with a long-term illness said their health had been 'good' compared with 81 per cent of those with no long-term illness. Conversely, 44 per cent of those with a long-term illness said their health had been 'not good', while for those with no long-term illness the figure was 1 per cent.

This relationship was fairly uniform across Council areas except in the two areas (Glasgow City and North Lanarkshire) reporting high levels of long-term illness. Those two areas showed the lowest rates of reporting health as 'good' among those with a long-term illness – and Glasgow City reported the lowest rate among those with no long-term illness.

When the response to the question on health is analysed by the tenure of household, high proportions of reporting of health 'not good' were found in the social rented sector and in households living rent free (both 18 per cent compared with 10 per cent for all persons in households). Low proportions of health 'not good' were seen in households buying their accommodation with a mortgage or loan (5 per cent).

Economic activity

Sex (Table 13)

Fewer men in full-time employment

Questions on economic activity were asked only of persons aged 16 to 74 in 2001. Of these, around two-thirds (65 per cent) were economically active in that they were working or were unemployed. This represented a slight drop of 1 per cent from 1991. Within this fairly static picture there were falls in the proportions of full-time employees (42 per cent in 1991 to 40 per cent in 2001), and persons unemployed (8 per cent to 4 per cent). There were increases in the proportions who were part-time employees (10 per cent in 1991 and 11 per cent in 2001), those self-employed (rising from 6 per cent to 7 per cent) and in economically active full-time students (1 per cent to 3 per cent).

Amongst persons who were not economically active, the largest group in 2001 was those retired (14 per cent), then those who were permanently sick or disabled (7 per cent). Both these proportions were much as in 1991, as was the proportion of economically inactive students (4 per cent). The main difference between 1991 and 2001 in those economically inactive was the fall in the proportion of those reported as looking after the home or family - down from 12 per cent to 6 per cent.

While for both males and females the proportion of part-time employees rose between 1991 and 2001, around seven-eighths of this type of employee were female. The fall in the proportion of those aged 16 to 74 who are full-time employees was predominantly due to the fall in males who are so employed (from 55 per cent to 51 per cent).

Females predominated in the category of 'looking after the home or family'. The fall mentioned above in this category for males and females combined was explained by the fall observed for females (from 22 per cent to 10 per cent).

Council area (Table 14)

Glasgow City has most unemployed and inactive

The Council areas where the self-employed constituted the highest proportions of those who are working tend to be rural: Orkney Islands (25 per cent), Argyll & Bute (19 per cent) and Scottish Borders (18 per cent). The picture was very similar in 1991.

Relatively high numbers of unemployed persons as a proportion of those economically active were found in Glasgow City (10 per cent) and Dundee City, East Ayrshire, North Ayrshire and West Dunbartonshire (all 9 per cent). The lowest rate of unemployment was in Shetland Islands (3 per cent). All Council areas showed falls in the percentage unemployed from 1991.

Council areas with a high rate of unemployment tended also to have a relatively high proportion of persons aged 16 to 74 who were economically inactive. Glasgow City (with 44 per cent) had the highest percentage of economically inactive.

Providing Care (Table 15)

One in ten a carer

The 2001 Census had a new question on the time spent by a person providing care, that is unpaid help to a family member, friend or neighbour because of long-term physical or mental ill-health or disability (including problems related to old age). Nine-tenths of the population reported that they provided no care, while 6.0 per cent reported they provided such help for up to 19 hours a week, 1.2 per cent provided 20 to 49 hours a week, and 2.3 per cent provided at least 50 hours a week.

Whether or not a person provided care and, if so, the amount of time spent so doing, was related to a person's economic activity status. Around a seventh of those in part-time employment were carers (a higher proportion than for all persons). A similar proportion of those economically inactive were carers, but a relatively high proportion of them (5.4 per cent) spent at least 50 hours a week in this activity. The proportion of those aged over 74 who were carers was relatively low (at 6.0 per cent) but around a half of them were carers for at least 50 hours a week.

National Statistics – Socio-economic Classification (NS-SeC) (Table 16)

New classification has replaced Social Class by Occupation

The new National Statistics – Socio-economic Classification (NS-SeC) replaces the former classification - the Registrar General's Social Class by Occupation. Of those in employment in 2001, the largest NS-SeC group was that of 'Lower managerial and professional occupations' representing a quarter of workers. This group has grown since 1991 when it was a fifth of workers; the growth is largely attributable to a growth in the number of females. Those with semi-routine occupations formed the next largest group with 16 per cent of workers – little changed from 1991. Around three-fifths of this group were female in 2001. The next largest groups in 2001, Intermediate occupations (with 13 per cent) and Routine occupations (12 per cent), both fell as proportions of all workers compared with 1991. The first of these was largely female in 2001 (72 per cent of the group) the second largely male (64 per cent).

Males tended to be spread out across all groups more than females. In particular they were relatively highly represented in the groups Large employers and higher managerial and professional occupations and Higher professional occupations. Both of these groups increased as proportions of the number of workers from 1991 to 2001.

Industry (Table 17)

Over a fifth of working women employed in Health and Social Work

The largest industry group in 2001 was 'Wholesale and retail trade; Repair of Motor Vehicles' with 14.4 per cent of those working – little changed from 1991. Manufacturing (at 13.2 per cent of workers)

had fallen from being the largest group in 1991 (with 18.2 per cent). Of workers in Manufacturing, 70 per cent were males. Health and Social Work increased its share of the workforce slightly (from 10.9 per cent to 12.4 per cent), and contained 21.4 per cent of female workers, more than any other industry group. At 11.2 per cent of workers, the next largest group in 2001, Real estate; Renting and Business Activities, showed a large increase from 1991 when it had 6.9 per cent of workers.

Other groups were either relatively small or were relatively unchanged from 1991. Of these, industries with mostly female workers were Education (7.3 per cent of workers in 2001), Hotels and Restaurants (5.7 per cent), and Financial Intermediation (4.6 per cent). Predominantly male groups were Transport, Storage and Communication (6.7 per cent of workers in 2001), Construction (7.5 per cent), Agriculture; Hunting; Forestry (2.1 per cent), Mining and Quarrying (0.3 per cent), and Fishing (0.3 per cent).

Tenure by Economic Activity (Table 18)

Unemployment higher in social rented and rent free sectors

The 2001 Census shows that there is a relationship between household tenure and economic activity, particularly self-employment, unemployment and economic inactivity. Looking at each tenure group, the highest proportions of self-employed (around a fifth of workers) were found in households owning their accommodation outright and those renting unfurnished in the private sector. Unemployment was relatively high (around a sixth of those economically active) in households in the social rented sector and those living rent free. Economic inactivity was high (over a half of all persons) in the same tenure categories and also in households owning their accommodation outright. A relatively low rate of unemployment (3 per cent) was seen in the owned sector generally. Economic inactivity was particularly low (18 per cent) in households buying their accommodation with a mortgage or loan.

Ethnic group by Economic Activity (Table 19)

Asians more likely to be self-employed

Self-employment was relatively high among ethnic groups with origins in Asia: Pakistani (36 per cent), Chinese (26 per cent), Indian (24 per cent), Bangladeshi (23 per cent) and Other South Asian (21 per cent). Unemployment was at or around the average for all groups (6 per cent) for the White groups and Indian and Chinese, while other groups had higher unemployment rates (from 9 per cent to 12 per cent). Economic inactivity was highest among the Pakistani and Other South Asian population (49 per cent for both).

Religion by Economic Activity (Table 20)

Muslims more likely to be unemployed

Around a third of workers who were Sikh, Muslim or Jewish were self-employed in 2001 as were a quarter of Buddhist workers. This compares with 11 per cent of the population aged 16 to 74 as a whole. One in ten Muslims who were economically active was unemployed, compared with 6 per cent of the population as a whole. Economic inactivity was relatively high among Buddhists and Muslims.

Travel

Cars and vans (Table 21)

More households with cars

About a third (34 per cent) of households were without a car or van in 2001. This was a fall from over two-fifths (43 per cent) in 1991. That the availability of cars increased from 1991 is also borne out by the fact that the percentage of households with two or more cars increased from 16 per cent to 22 per cent, while the proportion with one car also increased from 41 per cent to 43 per cent. The average number of cars per household increased from 0.76 in 1991 to 0.93 in 2001.

The Council areas with the highest proportions of households without a car or van were Glasgow City (56 per cent), Dundee City (46 per cent), Inverclyde and West Dunbartonshire (both 43 per cent). The lowest proportions were in Aberdeenshire (18 per cent) and East Renfrewshire (20 per cent).

Travel to work (Table 22)

More go to work by car

In the 2001 Census the 1991 questions on destination and means of travel to work were extended to cover travel to either work or study. Those whose destination of travel was deemed to be their workplace were workers who were not full-time students. Most of this group in 2001 (64 per cent) travelled to work by Car or motorcycle. The corresponding figure for 1991 was 56 per cent - representing an increase of 8 percentage points. This increase was at the expense of travel by Bus etc, which fell from 16 per cent in 1991 to 13 per cent, and Other means of transport (chiefly on foot or bicycle), which fell from 20 per cent to 14 per cent. The proportion of people working at home increased slightly from 5 per cent to 6 per cent.

Council areas with the largest proportions of workers travelling by Train or underground were Glasgow City and West Dunbartonshire (with 9 per cent compared with 3 per cent for Scotland as a whole).

Travelling to work by Bus etc was most common in the City of Edinburgh (26 per cent) and Glasgow City (24 per cent). Travelling by Other means was most common in Moray and Argyll & Bute (both 23 per cent). Working at home was most prevalent in rural areas such as Orkney Islands (15 per cent), Dumfries & Galloway (11 per cent) and Argyll & Bute, Eilean Siar, Highland, and Scottish Borders (all 10 per cent).

Travel to study (Table 23)

Many students still walk or cycle

Half of students and school-children travelled to their place of study by Other means i.e. chiefly by foot or bicycle. Almost a quarter fell into each of the categories Bus etc and Car or motorcycle. The remainder (3 per cent) travelled by Train or underground. Council areas with the highest proportions travelling to study by Train or underground were West Dunbartonshire (9 per cent) and East Renfrewshire (8 per cent). The latter was also the area with the highest proportion travelling by Car or motorcycle (31 per cent). Areas with the highest proportions travelling by Bus etc were the 3 islands areas: Eilean Siar (50 per cent), Shetland Islands (39 per cent) and Orkney Islands (38 per cent).

Travellers to study by Other means were relatively common in Aberdeen City (53 per cent), Dundee City (51 per cent) and East Lothian, the City of Edinburgh and Midlothian (all 50 per cent).

Educational Qualifications

Highest level obtained (Table 24)

A third have no educational qualifications

The 2001 Census asked form-fillers to tick as many of eight boxes that applied to indicate the type of qualifications obtained by those aged 16 to 74. The previous Census sought information about each degree, professional or vocational qualification (if any) held by persons aged 18 or over.

In 2001, the responses were used to assign each person to his or her highest level of qualification. A third of persons aged 16 to 74 had no qualifications recorded in the categories listed against the tick boxes on the form. There were a quarter whose highest qualification was at group 1, 16 per cent at group 2, 7 per cent at group 3 and 19 per cent at group 4 (degree or professional qualifications). Groups 3 and 4 roughly cover the same range of qualifications as in the 1991 question and just over a quarter (26 per cent) of persons aged 16 to 74 were in this category. The corresponding percentage in 1991 was 14 per cent, although it would be difficult to place a high degree of confidence in this comparison because of differences in the way the data were collected and in the age range covered.

The Council areas with the highest proportions of people with none of the listed qualifications were East Ayrshire and Glasgow City (both with 41 per cent). Those with most at level 4 were the City of Edinburgh (32 per cent) and East Dunbartonshire and East Renfrewshire (both with 29 per cent).

Table 1 Persons by age and sex, 2001 and 1991

	Persons		Male		Female	
	2001	Percentage 1991	2001	Percentage 1991	2001	Percentage 1991

Footnotes:

1 In 2001, people did not count as unemployed unless they were available to start a new job within 2 weeks. This condition did not apply in 1991.

2 In 1991, people ticking 'Other' in response to the question on economic activity were requested to enter their activity in a write-in box. The entry was, when appropriate, subsequently coded to one of the other categories. In 2001, there was no write-in box under the equivalent tick box.
