

**Annual Review 2015 - Chapter 11 - Migrants in Scotland's population histories since 1850**  
**Table 11.1: Age cohort depletion and population change, by age group, Clydebank 1921-1931**

Per cent depletion by age cohort, 1921-1931								
Age group 1921	5-9	10-14	15-19	20-24	25-29	30-34	35-39	40-44
Age group 1931	15-19	20-24	25-29	30-34	35-39	40-44	45-49	50-54
Male	-8	-12	-21	-24	-21	-19	-17	-14
Female	-12	-18	-15	-16	-17	-15	-14	-19

  

Per cent population change by age group, 1921-1931								
Age group	15-19	20-24	25-29	30-34	35-39	40-44	45-49	50-54
Male	-4	-2	-2	-4	-7	-6	-7	16
Female	2	4	-1	1	5	3	4	21

**Note**

Age cohort depletion is estimated as the difference between the number of persons in each age group in the first census population and those aged 10 years older in the next census population. No attempt has been made here to adjust for mortality because the most important net flows are very large relative to the population and the effect of age-specific death rates, the pattern of movement over any decade is unknown and no age-specific mortality data are available below county level.
