**Footnotes**

1) Refer to footnotes to Table 3.7(b).

The figures which appear in italics have been revised because their components include revised fertility rates in respect of births which occur years from 2002 to 2011, which have been calculated using the rebased population estimates which were published on 17th December 2013. to the revision of some of the cumulative fertility rates. For example:

- i) the cumulative fertility rate for the cohort born in 1958 incorporates the revised fertility rate for 44-year-olds in 2002;
- ii) the cumulative fertility rate for the cohort born in 1959 incorporates the revised fertility rates for 43-year-olds in 2002 and for 44-year-olds in 2003;
- iii) the cumulative fertility rate for the cohort born in 1960 incorporates the revised fertility rates for 42-year-olds in 2002, 43-year-olds in 2003 and 44-year-olds in 2004; and
- iv) the cumulative fertility rate for the cohort born in 1961 incorporates the revised fertility rates for 41-year-olds in 2002, 42-year-olds in 2003, 43-year-olds in 2004 and 44-year-olds in 2005.
