

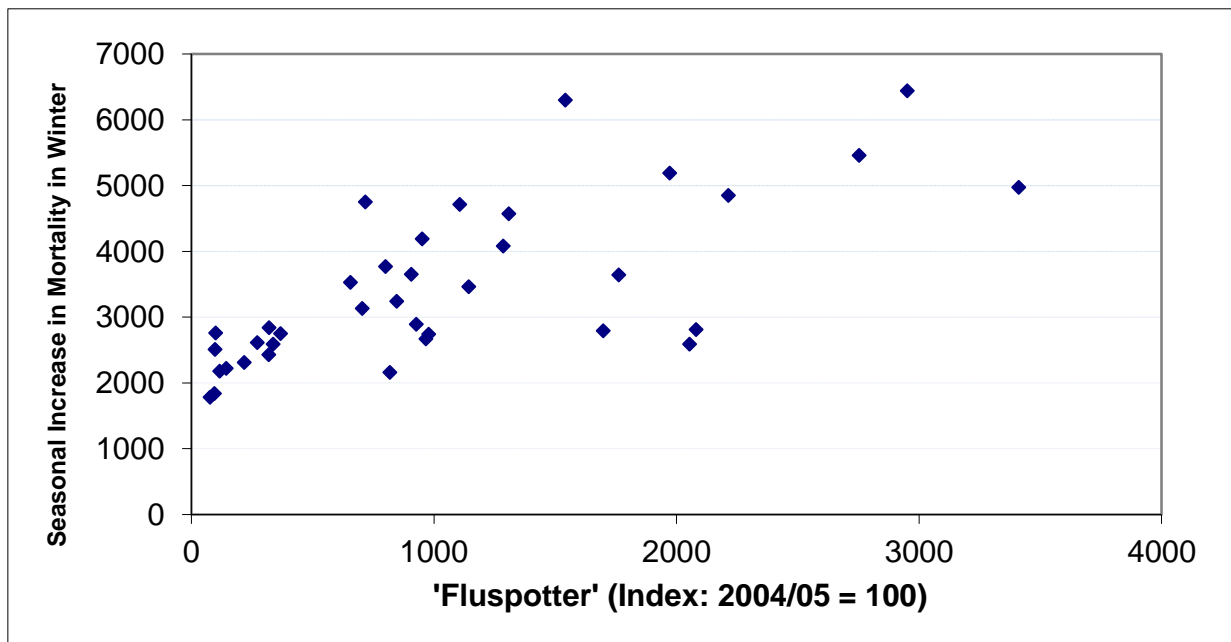

Figure 3: Seasonal increase in mortality in the winter and indicators of influenza activity, Scotland

(a) winters and 'flu seasons' - 1971/72 to 2007/08, inclusive

Note in that period, the maximum 'fluspotter' index value was 3,412 for winter 1971/72 (refer to Table 2)

(b) winters - 2003/04 to 2016/17, inclusive

Note in that period, the maximum 'SISRS' index value was 230 for winter 2008/09 (refer to Table 2)
